

Release Notes

Release Date: 19.03.26

Version: 24.16.0

Enhancements

Improvements to Time Off Calculations

Overview

We've made a series of improvements to how Time Off information is calculated behind the scenes. These updates help the system work more smoothly when displaying balances, working out entitlements, and showing holiday information for employees.

Benefits

- Time Off pages now load more quickly.
- Balances and accruals are calculated more efficiently.
- Improved accuracy and consistency when viewing or updating Time Off details.
- A better overall experience for HR teams and employees when managing absence.

How to Configure

There is nothing you need to set up — these improvements are applied automatically.

Fixes

Workflow Manager Reassignment Step Not Running

Issue resolved where workflow manager reassignment steps were not executing, meaning employees were not correctly reassigned to their new manager after changes.

Reset Time Off Allowance Report Working Incorrectly

Issue resolved where the “Reset time off allowance report balances” function did not correctly reset balances, causing inaccurate reporting results.

Social Recognition Category Description Not Displaying

Issue resolved where category descriptions did not appear unless a template was also added, limiting visibility and clarity for users.

People Analytics Dataset Showing No Data for 2026

Issue resolved where the People Analytics dataset incorrectly displayed no data for the year 2026, preventing accurate reporting.

Report Builder Showing Only 10 Rows Despite Higher Default Setting

Issue resolved where increasing the default row count did not apply, with the system continuing to show only 10 rows of output in reports.

Time Off Requests Not Syncing to Outlook

Issue resolved where Time Off requests were not syncing to Outlook calendars, causing discrepancies in employee and manager visibility.

Duplicate Time Off Type Error When Using Apostrophes or Special Characters

Issue resolved where creating a duplicate Time Off Type containing apostrophes or HTML special characters caused system errors.
