Release Notes

Release date: 12.06.25
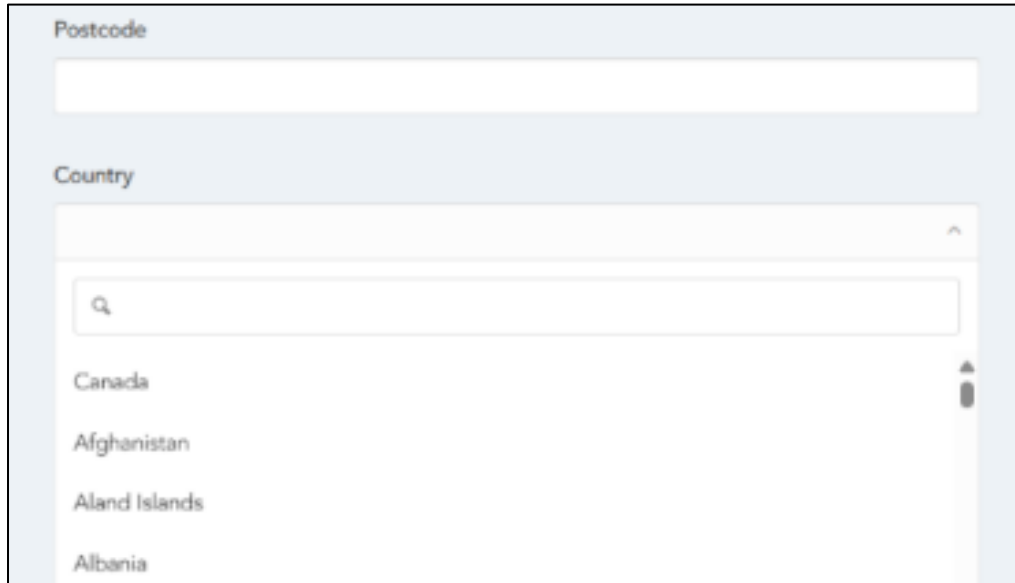

Version: 23.22.0

Enhancements

Country in drop down list

- Following customer feedback, we have updated the country dropdown list in the employee contact details section to better support Canadian users of HRWize.

- Canada now appears as the first selectable country after "Please Choose" in the dropdown.

- Applies when:

    - **Adding** a new employee: People > Employees > Add > Contact Details
    - **Editing** an existing employee: People > Employees > Edit > Address Details

- No country is selected by default, "Please Choose" remains the default and all other countries follow in alphabetical order after Canada.

Fixes

Administration: Issues with filenames containing apostrophes in 'ZIP Uploader with Preview'

- **Issue resolved** where, if a user uploaded a ZIP file using the 'ZIP Uploader with Preview' function, and that ZIP file contained a file with an apostrophe in its filename, it would not be possible to process that or any subsequent file.

Administration: Error when using the Reminders Bulk Upload

- **Issue resolved** where users uploading Reminders using the Bulk Uploader would experience a 'blank page' error.

Administration: Job Grade cleared when updating an Employee using the Update Employees Bulk Upload

- **Issue resolved** where, if an Employee record was updated using the Update Employees Bulk Uploader, and the Employee had a Job Grade assigned, that Job Grade would be incorrectly cleared.

Documents: Deleting an Employee Document does not display a banner to indicate Success / Failure

- **Issue resolved** where Deleting an Employee Document would not result in a banner message indicating Success or Failure.

Forms: Minimum character limit for Text fields not applied

- **Issue resolved** where, if a Minimum Character Limit was applied on a Text field, that limit was not enforced when completing the field.

Recruitment: Branding Settings not applied correctly in Recruitment Workflow emails

- **Issue resolved** where emails sent from Recruitment Workflows did not correctly apply the Branding settings associated with the Company or Site that was relevant to the Workflow\

Reporting: Reports containing the 'Request end date – Year' field did not return any results

- **Issue resolved** where including the 'Request end date – Year' field in the 'Time off period – By request' Dataset in a Report would result in that Report returning no results.

Reporting: Tile indicators not working as expected

- **Issue resolved** where, if a Tile Report is configured using Upper and Lower indicators, those indicators were not correctly applied to the Tile in some circumstances.

Workflows: Workflow steps trigger on incorrect dates when Due Dates span multiple years

- **Issue resolved** where, in some specific circumstances, where the Due Dates for Workflow Steps span multiple years (eg Step 1 is due in 2024, Step 2 is due in 2025) the steps in the second year could trigger earlier than expected.

Reporting: Reports filtered on 'Training title' produce no results where the Title contains a space

- **Issue resolved** where Reports based on the 'Training' data source produced no results if filtered by a 'Training title' containing a space character.

Announcements: Expired Announcements incorrectly displayed

- **Issue resolved** where Announcements which were set as Inactive would continue to display if the Expiry date had passed.

Administration: Unable to delete all data

- **Issue resolved** where, if the Main Admin user attempted to Delete all data stored in the account using the function in the Administration menu, their password would not be recognised and they would be unable to continue.

Templates: 'New Manager' tags incorrectly populated in Template Documents

- **Issue resolved** where, if the [new_manager_first_name] and [new_manager_second_name] tags were used in a Document Template, they would be populated with the incorrect Manager's name in the generated Document.

Timesheets: Manager Comments not retained when Pushing Back a Rejected Timesheet

- **Issue resolved** where, if a Timesheet was Rejected and Pushed Back whilst subject to a Timesheet Approval Workflow, any comments entered in the Manager Comments field were not retained.

Administration: HRWize customers receive an error when updating an employee without a work email

- **Issue resolved** where users in a HRWize environment who attempted to perform an 'Update Employees' Bulk Upload incorrectly received a Payroll-related error when updating an employee for whom the Work Email Address was not set.

Employees: Derived view puts some job changes in the wrong order

- **Issue resolved** where, in an environment where 'History display' is set to the 'Derived' view, some job changes appeared on the Employee View page in the incorrect order.

Expenses: USD to EUR currency conversion produced incorrect results

- **Issue resolved** where, in some circumstances, currency conversion from United States Dollars (USD) to Euros (EUR) in the Expenses module produced an incorrect result.

Expenses: No USD conversion when submitting expenses with GBP set as default currency.

- **Issue resolved** where, in an environment where the default currency is Great British Pounds (GBP) and an Expense claim was entered in United States Dollars (USD) the currency conversion did not apply.

Social: Flagged Posts appear in both Social Moderation and Social Recognition

- **Issue resolved** where a Social Recognition post which required Moderation (as the result of containing a phase from the profanity list) was prematurely displayed in Social Recognition. This made it possible for a user with access to Social Recognition to bypass Moderation.

Forms: Issues with Performance Review Forms when using Canadian (French) language

- **Issue resolved** where, for users of the Canadian (French) language, Editing a Performance Review form resulted in issues with the User Interface.
